My name is **Alexzander Manning**. I am a **Software Developer** by trade and and tech enthusiast.

I was one of the last hires at a successful startup and learned their stack quickly and efficiently. I'm passionate about technology - not a specific framework or language. In this line of work it's about adaptation, and what works best for the project. I'm open to learning any stack if it works.

My motto as a developer is if I am the smartest person in the room, I am in the wrong room. I love learning, and want to become the best developer I can be. I am a maker - I enjoy creating In my career and after hours. I believe in shipping quality code and working in flow.

I have experience with peer code reviews, mentoring and pair coding sessions. I also have experience with tedious refactoring, and entire re-writes of medium to small scale applications. I have a history working in a remote environment(working flex and core hours), as well as working with small development teams.

I care deeply about the code I write and the effect my work has on the product. I enjoy interaction with clients and seeing the joy they get when they get the application they've been wanting.

I am a Fullstack developer by trade, however I seem to have an eye for design and user experience. I enjoy working with UI/UX to make sure their designs are functional, accessible, and give the intended experience.

That said - I think I align with what you're doing and believe I would be a great fit technology and culture wise. If I'm not a perfect match for this position I am open to other positions that may better fit qualifications.

Looking forward to hearing back

Kind Regards,

Alexzander Manning
